

Abstract

A case with a partition member, where welding between the case and a cover in addition to that between the case and the partition member can be confirmed by an airtightness test. The case has a case (11), a cover (12) for covering the case (11), and a partition member (13) sandwiched between the case (11) and the cover (12) and partitioning the insides of the case (11) and the cover (12). A second welded portion (22) where the case (11) and the partition member (13) are welded is provided inside a first welded portion (21) where the case (11) and the cover (12) are welded, and a third welded portion (23) where the case (11) and the partition member (13) are welded is provided inside the second welded portion (22). Further, a hole (24) opened to the air is provided in that portion of the case (11) that is between the second welded portion (22) and the third welded portion (23).
